Managing people for the first time

New York City - a to Z

An Introduction to Monetary Theory

pertrochanteric hip fractures. The Dynamic Martin Screw (DMS) addresses the issue of adjustability of the fixation angle with appropriate mechanical strength characteristics that were lacking in its historical predecessors.

8% to 20% and the life ending effect of these fractures becomes a glaring reality. Of those who initially survive their fracture, about 50% never walk the same again. The social problem in the care of these elderly people is enormous. Of course, this does not include the economic factor which is immense. The treatment of fractures in the elderly is a field that requires new insights and the development of modern therapeutic means.
